CAST SHEET COATING

The Extrusioners

## Reitruder Check

We check the wear of your extruder screws and barrel segments. The wear characteristics depend on different parameters such as the raw materials or the operational conditions. We recommend an initial inspection after 2000 to 5000 operating hours. Based on the test log, we are able to determine together with you further service intervals and measures optimized for your application.

### Your benefit

- Securing the sustainable output capacity of the Reitruder
- Avoiding unplanned machine downtimes
- Reduction of consequential costs
- Proposal for preventive measures
- Appreciation by OEM service

### Scope of services

- Measuring the extruder screws
- Measuring the barrel
- Provision of necessary tools and equipment
- Preparation of a status report of your Reitruder
- Issuing a measurement report
- Recommendations of measures and corrections

### Price

Reitruder check EUR 950.00  
Includes preparation, follow-up, and documentation  
Net prices plus travel expenses

### Prerequisites

The barrel is disassembled and placed next to the line. The screws have been extracted and cleaned.
